Q. Analyze the fielding performance of three players from a T20 match to evaluate their individual contributions to the team's defense.

As part of the task, I also conducted a Fielding Performance Analysis, which you can explore in detail here:

<https://docs.google.com/spreadsheets/d/1e7J9UM-xlUfT5t-xtLjzknNRiSluxN9U/edit?usp=sharing&ouid=107778951886323048897&rtpof=true&sd=true>

Analyzed code for fielding performance:

This code creates a bar chart to visualize the fielding performance scores of three Indian players from the

India vs Pakistan match on 9 June 2024. It assigns custom colors to each bar, adds labels for the axes and title,

and sets the y-axis limit to 20 for consistent scaling. Each bar displays its corresponding score above it.

Finally, the chart layout is adjusted for better spacing using 'tight_layout()', and the plot is displayed.

```
import matplotlib.pyplot as plt
```

```
players = ["Shivam Dube", "Arshdeep Singh", "Suryakumar Yadav"]
```

```
scores = [15, 12, 8]
```

```
colors = ['#4CAF50', '#2196F3', '#FFC107']
```

```
plt.figure(figsize=(8, 5))
```

```
bars = plt.bar(players, scores, color=colors, edgecolor='black')
```

```
plt.title('Fielding Performance Scores - India vs Pakistan (9 June 2024)', fontsize=14)
```

```
plt.xlabel('Player', fontsize=12)
```

```
plt.ylabel('Performance Score', fontsize=12)
```

```
plt.ylim(0, 20)
```

```
for bar in bars:
    yval = bar.get_height()
    plt.text(bar.get_x() + bar.get_width()/2.0, yval + 0.3, int(yval), ha='center',
             va='bottom', fontsize=10)

plt.tight_layout()
plt.show()
```

Output:
